

ILAC has the pleasure to invite you to the following conference which will take place on Thursday 29 February at 6:15pm at EY Luxembourg (35E, Avenue John F. Kennedy, 1855 Luxembourg) on:

Identifying causes of European natural hazard loss increase year-on-year: Climate change or something else?

Kelsey Mulder

*Catastrophe Research Manager at Liberty Specialty Markets
PhD in Atmospheric Science*

will do us the honour of being our speaker on that occasion.

(The conference will be held in English)

In the insurance industry, a commonly held assumption is that losses are increasing over time due to climate change alone. However, there could be several causes for changing losses. We seek to diagnose the increase of insured natural catastrophe losses year on year between multiple causes: economic inflation, building vulnerability, changing exposure distributions, and other drivers including climate change.

We hope that you will be able to join us. We kindly ask you to confirm your presence at the following link:
